

# Project Proposal

Team 16: Allen Zhu, Justin Tran, Vishnu Ranganath, Tanish Paruchuri

This document outlines our proposal for a database system to manage a hotel. Individual contribution amongst ourselves was even; each one of us contributed 25% towards the proposal.

Tools Used for the ER diagram and Schema Diagram include  
Google Docs and diagrams.net

## Schema Diagrams:

### GUEST

<u>Guest_id</u>	Name	Room_number	Date_of_birth	Address	Email
-----------------	------	-------------	---------------	---------	-------

### RESERVATION

<u>Booking_id</u>	Check_out	Check_in	Name_of_reserver	Rooms_rented
-------------------	-----------	----------	------------------	--------------

### REQUEST

Datetime_issued	<u>Request_id</u>	Room_number	Request_specifications	Datetime_fulfilled	Employee_id
-----------------	-------------------	-------------	------------------------	--------------------	-------------

### ROOM

Daily_room_cost	Occupancy	<u>Room_number</u>	Room_type	Floor_number
-----------------	-----------	--------------------	-----------	--------------

### FLOOR

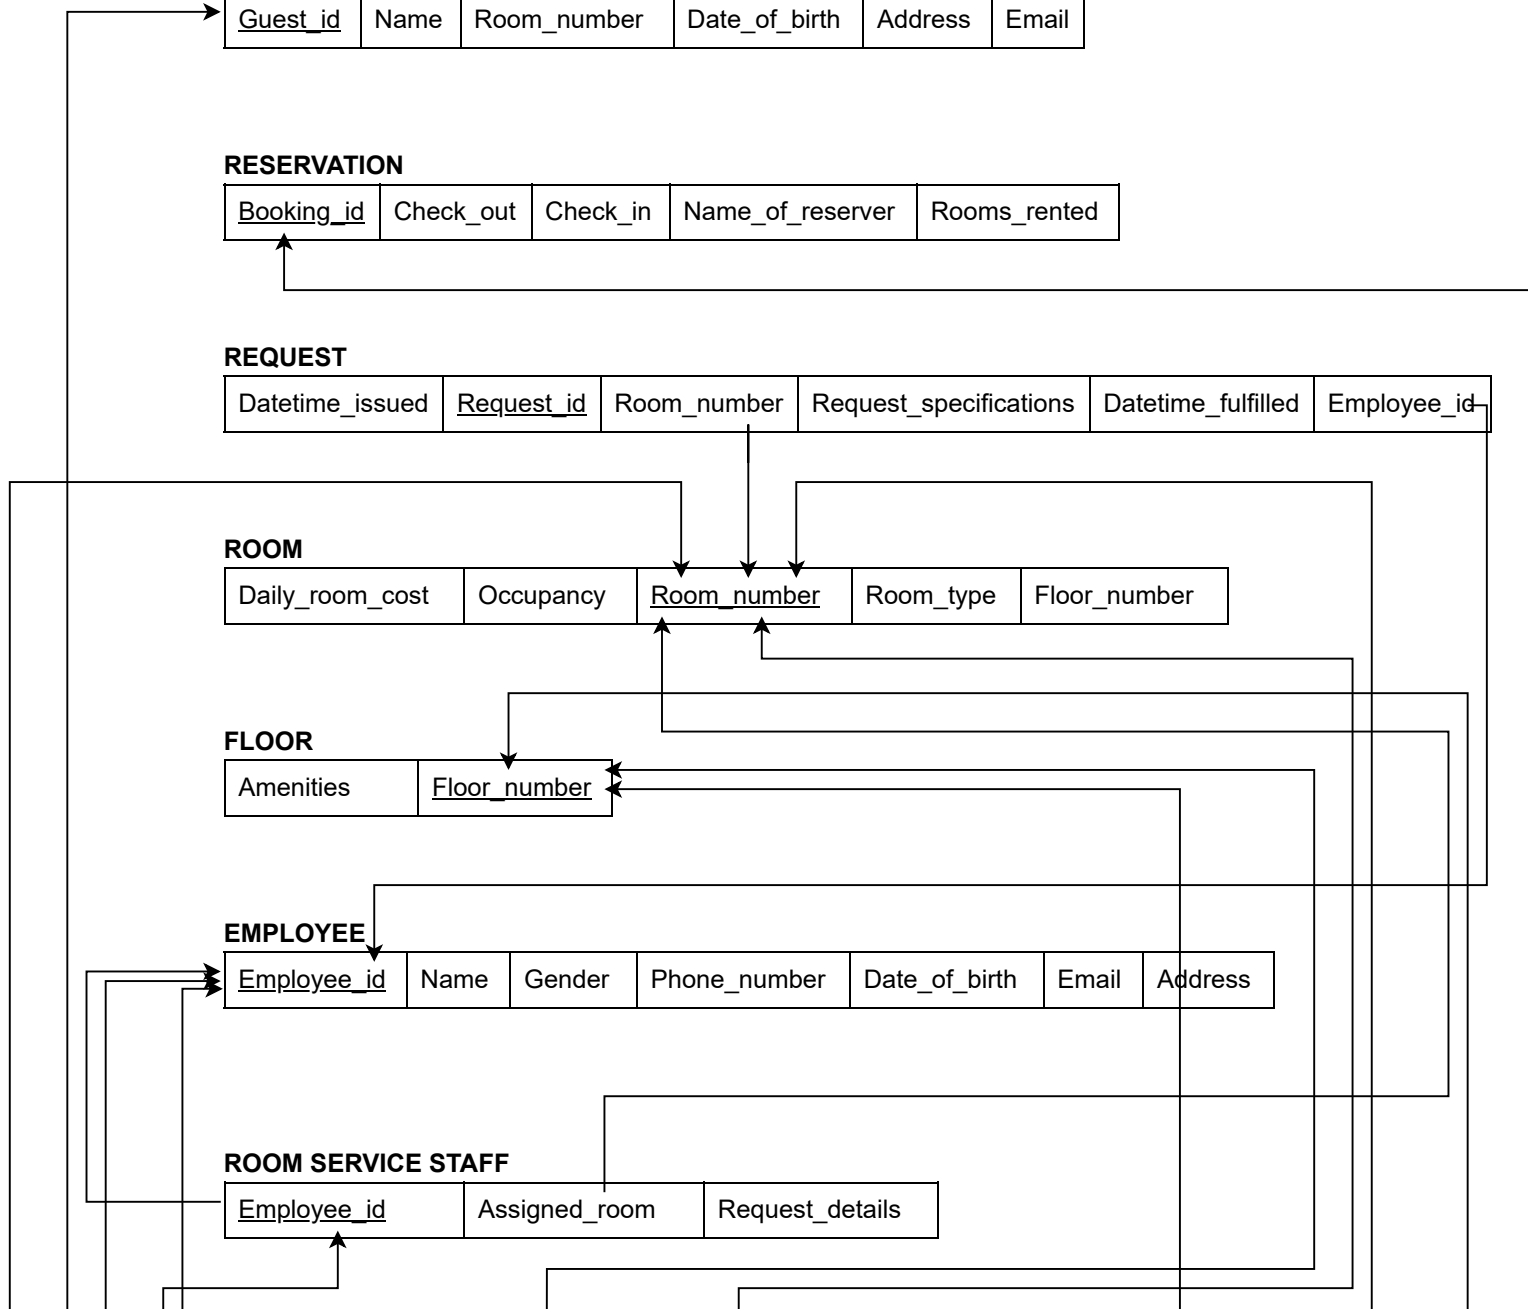

Amenities	<u>Floor_number</u>
-----------	---------------------

### EMPLOYEE

<u>Employee_id</u>	Name	Gender	Phone_number	Date_of_birth	Email	Address
--------------------	------	--------	--------------	---------------	-------	---------

### ROOM SERVICE STAFF

<u>Employee_id</u>	Assigned_room	Request_details
--------------------	---------------	-----------------

**HOUSEKEEPING STAFF**

<u>Employee_id</u>	Current_floor	Requested_room
--------------------	---------------	----------------

**MANAGER**

<u>Employee_id</u>	Managed_floors	Managed_employees
--------------------	----------------	-------------------

**UPKEEPS**

<u>Employee_id</u>	<u>Floor_number</u>
--------------------	---------------------

**ARE\_SERVED\_BY**

<u>Employee_id</u>	<u>Room_number</u>
--------------------	--------------------

**BOOKING**

<u>Guest_id</u>	<u>Room_number</u>	<u>Booking_id</u>
-----------------	--------------------	-------------------

**ARE\_MANAGED\_BY**

<u>Employee_id</u>	<u>Floor_number</u>
--------------------	---------------------

**HOUSEKEEPING STAFF**

# Data Dictionary

Friday, March 4, 2022 10:29 PM

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
EMPLOYEE	A person that Is working for the hotel	Employee id	(Employee_id, Name, Gender, Phone_number, Date_of_birth, Email, Address)	Attribute	Data Type	Domain	N/A
				Employee_id	INT	Any Integer corresponding to a hotel employee	
				Name	VARCHAR(40)	Any String	
				Gender	VARCHAR(10)	Any String	
				Phone_number	INT	Any 10 digit or less Integer	
				Date_of_birth	DATE	Any Date	
				Email	VARCHAR(40)	Any String containing an @ directing to an email host	
				Address	VARCHAR(40)	Any String	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
ROOM SERVICE STAFF	A type of Employee who provides room service to the guests.	Employee id	(Employee_id, Assigned_room, request_details)	Attribute	Data Type	Domain	Assigned_room, Employee_id
				Employee_id	INT	Any Integer corresponding to a hotel employee	
				Assigned_room	INT	Any Integer corresponding to a hotel room	
				Request_details	VARCHAR(300)	Any String	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
HOUSEKEEPING STAFF	A type of Employee who cleans the Hotel rooms.	Employee_id	(Employee_id, Current_floor, Requested_room)	Attribute	Data Type	Domain	Requested_room, Employee_id
				Employee_id	INT	Any Integer corresponding to a hotel employee	
				Current_floor	INT	Any Integer corresponding to a hotel floor	
				Requested_room	INT	Any Integer corresponding to a hotel room	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
MANAGER	A type of Employee who manage people who work for the hotel.	Employee_id	(Employee_id, Managed_floors, Managed_employees )	Attribute	Data Type	Domain	Employee_id
				Employee_id	INT	Any Integer corresponding to a hotel employee	
				Managed_floors	SET(1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12)	Any number of floors listed	
				Managed_employees	VARCHAR(300)	Any String listing employees at the hotel	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
ROOM	A place for a guest to stay in the Hotel.	Room number	(Room_type, Room_number, Occupancy, Daily_room_cost, Floor_number)	Attribute	Data Type	Domain	Floor_number
				Room_type	ENUM(" King", "Queen", "Twin", "Standard Suite", Presidential Suite)	Any of the listed room types	
				Room_number	INT	Any Integer corresponding to a hotel room	
				Occupancy	INT	Any Integer below 10	
				Daily_room_cost	DOUBLE	Any Double with two decimal places	
				Floor_number	INT	Any Integer corresponding to a hotel floor	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
FLOOR	Floors of the Hotel	Floor_number	(Floor_number, Ameneties)	Attribute	Data Type	Domain	N/A
				Floor_number	INT	Any Integer corresponding to a hotel floor	
				Ameneties	VARCHAR(100)	Any String	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
GUEST	A person currently staying at the hotel.	Guest_id	(Guest_id, Name, Room_number, Date_of_birth, Address, Email)	Attribute	Data Type	Domain	Room_number
				Guest_id	INT	Any Integer	
				Name	VARCHAR(50)	Any String	
				Room_number	INT	Any Integer corresponding to a hotel room	
				Date_of_birth	DATE	Any Date	
				Address	VARCHAR(40)	Any String	
				Email	VARCHAR(40)	Any String containing an @ directing to an email host	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
REQUESTS	A request made by a guest at the hotel.	Request_id	(Request_id, Datetime_issued, Datetime_fulfilled, Request_specifications, Room_number, Employee_id)	Attribute	Data Type	Domain	Room_number, Employee_id
				Request_id	INT	Any Integer	
				Datetime_issued	DATETIME	Any Date and Time	
				Datetime_fulfilled	DATETIME	Any Date and Time	
				Request_specifications	VARCHAR(300)	Any String	
				Room_number	INT	Any Integer corresponding to a hotel room	
				Employee_id	INT	Any Integer corresponding to a hotel employee	

Table	Table	Primary	SuperKey	Attributes			Foreign Key
-------	-------	---------	----------	------------	--	--	-------------

	Description	Key					
RESERVATIONS	A request made in order to book a room at the hotel.	Booking_id	(Booking_id, Check_in, Check_out, Name_of_reserver, Rooms_rented)	Attribute	Data Type	Domain	Name_of_reserver
				Booking_id	INT	Any Integer	
				Check_in	DATE	Any Date	
				Check_out	DATE	Any Date after Check_in	
				Name_of_Reserver	VARCHAR(40)	Any String	
				Rooms_rented	VARCHAR(30)	Any String containing a list of room numbers in the hotel	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
ARE_SERVED_BY	The relationship between Room service staff and their respective rooms	(Employee_id, Room_number)	(Employee_id, Room_number)	Attribute	Data Type	Domain	Employee_id, Room_number
				Employee_id	INT	Any Integer corresponding to a hotel employee	
				Room_number	INT	Any Integer corresponding to a hotel room	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
UPKEEPS	The relationship between Housekeeping and which floors they upkeep	(Employee_id, Floor_number)	(Employee_id, Floor_number)	Attribute	Data Type	Domain	Employee_id, Floor_number
				Employee_id	INT	Any Integer corresponding to a hotel employee	
				Floor_number	INT	Any Integer corresponding to a hotel floor	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
BOOKING	The relationship between Guests, their reservations, and the rooms booked by said reservations	(Guest_id, Room_number, Booking_id)	(Guest_id, Room_number, Booking_id)	Attribute	Data Type	Domain	(Guest_id, Room_number, Booking_id)
				Guest_id	INT	Any Integer corresponding to a guest id	
				Room_number	INT	Any Integer corresponding to a hotel room	
				Booking_id	INT	Any Integer corresponding to the id of a reservation	

Table	Table Description	Primary Key	SuperKey	Attributes			Foreign Key
ARE_MANAGED_BY	The relationship between Managers and the floors they manage	(Employee_id, Floor_number)	(Employee_id, Floor_number)	Attribute	Data Type	Domain	Employee_id, Floor_number
				Employee_id	INT	Any Integer	

						corresponding to a hotel employee that is a Manager	
					Floor_number	INT	Any Integer corresponding to a hotel floor
